CHINAELABC2690050**Description :**

Proctor Compaction Test Apparatus

Technical Specification :

The relationship between soil moisture content and compacted dry density is very useful for deciding construction specifications and quality control of compacted earth fill. Proctor Compaction Test Apparatus a fundamental requirement for the construction of earth fill for dams, reservoirs, canal embankments, highways, railways and runways. The construction quality control is essential to check the density of compacted soil achieved in the field, thereby checking its strength.

Specifications:

Diameter of the hammer: 50mm

Drop: 300mm

Weight of the hammer(hammer weight): 2.5Kg

Dimension of the compaction mould: $\varnothing 100 \times 127 \text{mm}$
