Air Entrainment Meter

Technical Specification :

Air Entrainment Meters are used for determining the air content of fresh concrete. They consist of a flanged 7 or 8 liter capacity cylindrical vessel and cover assembly incorporating a pressure gauge, air pump and valves. They have a quick action clamping system. It is not affected by changes in barometric pressure. Direct pressure gauge reading to the nearest 0.1% up to 6%, 0.2% from 6 to 8 and % 0.5 from 8 to 15. Calibration vessels and compacting bar with square section should be ordered separately.

Standards: EN 12350-7 | ASTM C231 | AASHTO T152

The Air Entrainment Meter is supplied complete with :

Straight Edge

An inner and an outer (J-Type) calibration pipes

Tamping Rod, Ø16×600 mm

Special Carrying Case
